

Mnemosyne

Goddess of the memory

Purpose

The initiator of the Mnemosyne project is a health care organization in the Catalan region of Spain. Besides the Wever and ZorgtechnoService also other health care organizations and knowledge institutes and local authorities from other regions of Spain, Austria, Italy and Estonia participate in the project.

Goal of the project is to develop all kinds of short practical instruction movies and story boards which can be used in several learning modules for people with dementia and their carers.

De Wever

verzorging, verpleging,
reactivering en thuiszorg

ZorgtechnoService

Provincie Noord-Brabant

European Internet platform

People with memory deficits and their carers can get access to these extra services by the internet platform. In this way we are able to learn from each other via the digital highway.

And professionals and informal carers can use the practical tips and instructions via the internet. Every region brings in their knowledge.

The Wever and ZorgtechnoService are already working with a digital platform www.geheugenwinkeltilburg.nl. We have made an English version of this platform so we can share good practices and develop together new e-services for carers in Europe.

This enables us to exchange successful support and training interventions. Some of them can be combined with on line services which can be used all over Europe. We will develop the on line services in co creation with end users: people suffering from dementia and their carers and professional caregivers.
